

NewWorld Capital Group, LLC

Profit in Transitioning to a Clean Economy

Transitioning to a low-carbon and cleaner economy will require massive amounts of investment capital coupled with smart investment capability. The NewWorld team has specialized knowledge and skills in originating and executing high-value proprietary investment opportunities across the rapidly-growing environmental opportunities sector.

- **NewWorld invests in the rapidly-growing environmental opportunities sector, principally in North America**, which spans clean energy, energy efficiency, environmental services, water, and sustainable and biodegradable materials.
- **Environmental opportunities is a new investment class** benefiting from strong market growth, coming environmental regulations and government economic incentives, and other initiatives aimed at mitigating climate change, promoting more efficient use of resources, moving toward a cleaner economy, and improving energy security.
- **NewWorld focuses on the “commercialization gap”** where mid-market companies and related clean infrastructure projects require significant capital to support their continued development and growth.
- **NewWorld is a private equity firm – it is not a venture firm – and is a growth equity investor** seeking to partner with proven management teams and other value-added collaborators in companies and projects using proven technologies and risk-mitigated investment strategies.
- **NewWorld’s investment team is highly qualified and brings diverse skills to the task.** The team comprises senior executives with broad experience in investing in environmental opportunities and deep knowledge of the underlying markets, current and emerging technologies, private equity and infrastructure project finance, and government programs and regulations at all levels.
- **NewWorld’s investment portfolio will be diversified by sub-sector, enabling technology, geography, and regulatory regime**, providing expansion capital to growing companies, development capital to infrastructure project developers, and project capital to production-scale plants with no technology risk, low commodity price risk, and long-term revenue contracts.
