

NewWorld Capital Group, LLC

Profit in Transitioning to a Clean Economy

The NewWorld team has specialized skills and knowledge in originating high-value investment opportunities across the environmental opportunities sector and supporting these companies in reaching commercial scale.

- **NewWorld invests in the rapidly growing environmental opportunities sector in the United States and Canada** and selectively in Europe, which spans **energy efficiency, clean energy, water resources and reclamation, waste-to-value, and environmental services.**
- **Environmental opportunities is an emergent investment sector** benefiting from strong underlying market growth, high rates of business and technology innovation, and limited competitive intensity—and is currently under-capitalized relative to need and opportunity.
- **NewWorld’s investment strategy focuses on the “Commercialization Gap”** where mid-sized and smaller companies require capital and management support in their continuing development and growth. This mid-market focus allows NewWorld to originate proprietary high-return deal flow from industry segments often overlooked by larger or less-specialized investors.
- **NewWorld is a private equity firm—not a venture firm**—and seeks to partner with competent management teams in companies deploying proven technologies with distinctive business models through risk-mitigated investment strategies. NewWorld will accept a measure of business-scaling risk but will not accept technology risk.
- **NewWorld’s investment team is highly qualified and brings diverse skills** in private equity investing and business building. The team includes senior executives with broad experience investing in our target sector and deep knowledge of underlying markets, current and emerging technologies, private equity investing, corporate and project finance, and government programs and regulations at all levels.
- **NewWorld’s investment portfolio will be diversified** by sub-sector, value drivers, and risk factors, including technology and regulatory regime.
